Introduction

An open-source workbench integrated in the Galaxy framework that enables researchers to set up a computational pipeline for quantitative transcriptome analysis.

Accessibility

Oqtans enables users without programming experience to easily specify parameters and run tools and workflows through Galaxy.

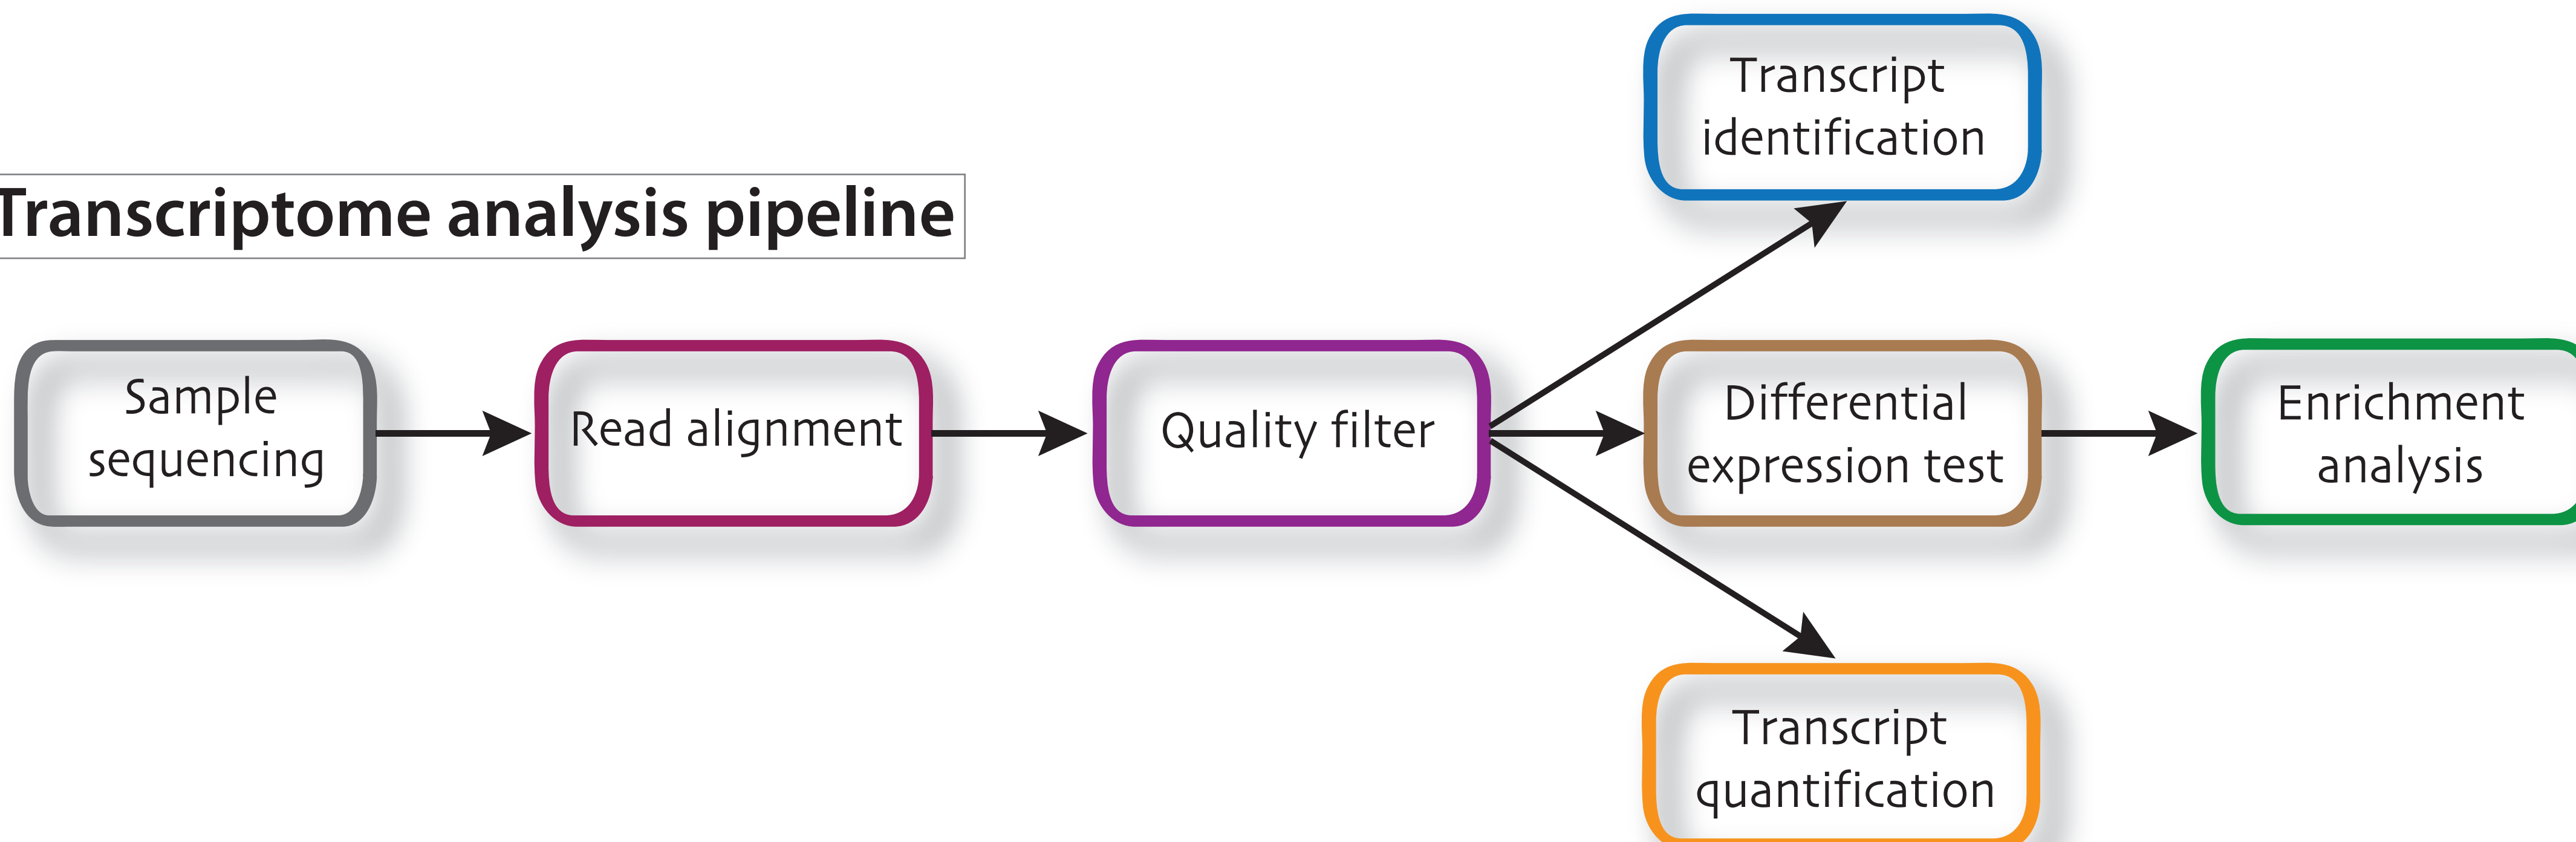

Reproducibility

Galaxy captures all information necessary so that any user can repeat and understand a complete computational analysis.

Transparency

Galaxy enables users to share and publish analyses via the web and create interactive, web-based documents that describe a complete analysis.

oqtans Availability

GitHub This repository

PUBLIC [ratschlab / oqtans](#)

Alignment optimization and postprocessing toolbox

PALMapper

Highly accurate variation aware sequencing read mapper

RNA-geeq

Margin based transcript reconstruction from read alignments

mTIM

Accurately determine the abundance of transcripts

rQuant

rDiff

Differential RNA-processing program

Compute and visualize the differential expressed gene families

GeneSetter

Tool exchangeability
